Summary

Accomplished Full Stack Developer with 5+ years of experience, dedicated to delivering innovative solutions for complex business problems. Proven ability to bridge the gap between business requirements and technical solutions, consistently exceeding expectations.

Objective

Seeking a dynamic role in web development and related tasks to contribute proactively to organizational goals, while also seeking a platform to learn and grow in the ever-evolving field of technology.

Professional Experience

Freelance Full Stack Developer, Royalbrains Technology (2018 – 2022)

- Completed multiple projects as a freelance Full Stack Developer with Royalbrains Technology.
- Solely developed a school management software from scratch using Laravel for the backend and Vue.js with Bootstrap for the frontend. Features included CBT, results computation, online fee payment, performance tracking, attendance, live video streaming, and more. (<https://royalbrainsschoolapp.com>)
- Created Sonellworkingapp, an insurance management app using React, Express, and Prisma (ORM). (<https://sonellworkingapp.com>)

- Designed and developed a sales point and inventory management system for Wholesale/Retail business (Aniekan Napolion Enterprise) using Express and MongoDB. Features included product inventory tracking, sales and purchase order management, and customer and supplier management.
