Solution-driven web developer adept at contributing to a highly collaborative work environment and finding solutions. Proven experience developing consumer-focused websites using HTML, CSS, PHP and JavaScript. Good knowledge of the best practices for web design and experienced at creating web applications that are both aesthetically pleasing and functional

SKILLS

PHP / Laravel

JavaScript / Vue

EXPERIENCE

Full Stack Developer at Pixie Technologies. 2021 - 2024

- Created applications from scratch as per UI/UX, product manager and client requirements
- Made changes to existing applications in record time to meet demands of new and existing clients and uploaded vetted applications to servers
- Introduced new flexible framework that halved the development time and enhanced developers' experience
- Brought forth a passionate, dedicated, can do attitude to work, built interpersonal relationship with co-workers and managers

PROJECTS

Site-Laravel - <https://github.com/karlebh/site-laravel>

- Created a notification system to notify users of new followers
- Implemented a event/listener mechanism that intercept new comment and like on users posts and notify them as per user settings
- Integrated a polymorphic relationship that keeps all images in a single table and relate it with several models
- Wrote a complex CRUD that involves storing multiple images at once, firing appropriate events and sanitizing users inputs

Forume - <https://github.com/karlebh/Forume>

- Designed the front-end using a mock-up and made the website mobile responsive on various approved screen sizes
- Integrated an admin functionality allowing certain privileges to superusers, also created an admin panel where these superusers can observe the site's analytics
- Included users' ability to make posts, create comments, like or unlike a post or comment, follow other users and change the site settings
- Created a profile page that shows users non-sensitive details and their recent post activities

Items - <https://items-indol.vercel.app/>

- A client facing e-commerce store that consumes an API of products
- Integrated two payment gateways, Flutterwave and Paystack, enabling the users to pay using local and foreign currencies in any location
- Included products categories making it easier for users to locate and browse products
- Integrated a text-based search algorithm that enables users to locate products in any page

Store - <https://store-gules-chi.vercel.app/>

- Made an API call to display available products in store to users in paginated fashion
- Implemented a feature that allows users to add their desired products to a section until their done shopping for checkout
- Added a dark mode functionality which enhanced user experience
- Created an animated responsive slideshow of images of suggested products that may interest new and existing visitors
